

Lossless energy transport: the magic of superconductors

Thursday, 20 November, 5 pm
Bristol-Myers Squibb Lecture Theatre
Department of Chemistry, Lensfield Road

Discussion by **Dr. Suchitra Sebastian**,
University Lecturer in Physics,
Fellow of King's College

Dr. Suchitra Sebastian is a University lecturer in Physics at Cambridge University, a Royal Society University Research Fellow in Physics at the Cavendish Laboratory, and a fellow of King's College Cambridge. Suchitra's research interests are in the area of correlated electron systems, particularly in novel materials. Her research focuses on the search for emergent quantum phenomena in a variety of new materials under extreme conditions.
